

Samsung Austin Semiconductor

To Whom it May Concern,

Recently, I have been introduced to a company named ID Theft Solutions of America. We learned of this company through our local association and have been very happy with the results we have seen from their professional staff as well as our employee's response to the information.

ID Theft Solutions of America offers a NO COST program that benefits companies in two important ways.

- **Assessment and Training** - No cost risk assessment of your office's policies and procedures as well as employee training to help your office meet requirements with State & Federal ID Theft/Privacy laws. The training was received by our staff in a very positive way and we were glad that we did it; employee surveys came back with excellent reviews.
- **Employee Benefits** - ID Theft Solutions of America offers training about ID theft and protective coverage through your HR department. These benefits are optional for employees and are paid by the employees directly from payroll deduction. I was first concerned about the sales presentation portion of their proposal but after attending the training sessions myself, it is very apparent that protection truly is a by-product of the training regarding Identity Theft and Legal issues that we all face in today's world.

Everyone in today's environment understands the importance of protecting personal data. Many of us in the technology industry have been very aware of HIPAA and other data protection laws for many years but may have not have given the proper focus and attention that a thorough Privacy program should really have. IDTSOA takes the headache off our plates which has been a refreshing experience. I highly recommend that you take the time to learn how ID Theft Solutions of America's unique programs can help to protect your organization at virtually no cost.

Sincerely,
