

To whom it may concern:

First and foremost, we were very pleased with the results and implementation of their physical data breach prevention program. Their team of certified risk management specialists took great care in training our employees, as well as providing a thorough physical risk assessment, and breach response plan. We feel confident that the “Culture of Security” is now stronger, enabling our hospital to better protect patients, employees, and vendor’s sensitive information.

While their team was on site, we met to discuss an IT risk analysis to provide us a 3<sup>rd</sup> party point of view. We chose to use their program for several reasons: IDTSOA had shown great knowledge and expertise regarding data breach and ID theft prevention with their physical compliance program and their remote IT analysis met the HITECH/Meaningful Use Standards. The program was simple to implement and allowed us to have minimal distractions during our workday and run the program on our time. When the final report arrived we were exceptionally pleased as it was broken down into priorities and also provided resources to address our security concerns.

We highly recommend IDTSOA for any hospital looking to partner with an organization that has made a complicated and expensive matter, simple and inexpensive.

Sincerely,

*Lesley Mukoro*
